EXECUTIVE INTELLIGENCE

Executive brief

This flagship synthetic demonstration publication examines humanitarian response performance in Somalia. The governed evidence model identifies uneven progress, concentrated risks and actionable opportunities. Findings are linked to synthetic source records, recommendations carry named accountability fields, and all statistical claims are generated from one internally consistent dataset.

DECISION REQUIRED

Prioritise severity-four locations in the next allocation round for humanitarian response.

STRATEGIC OUTLOOK

Improvement is achievable within 12-18 months if ownership, resourcing and evidence review are maintained.

CRITICAL FINDING

Finding 1: Critical finding 1: multisector severity

Across Somalia's synthetic study areas, multisector severity is the clearest differentiator of humanitarian response performance. The evidence is strongest in Bay Cluster, where rural women face the largest gap. If the pattern remains unaddressed for twelve months, it is likely to weaken equity, delivery confidence and the durability of outcomes.

EVIDENCE

CONFIDENCE

96.5%

DECISION IMPLICATION

Prioritise severity-four locations in the next allocation round for humanitarian response.

CRITICAL FINDING

Finding 2: Critical finding 2: protection exposure

Across Somalia's synthetic study areas, protection exposure is the clearest differentiator of humanitarian response performance. The evidence is strongest in Gedo Cluster, where young adults face the largest gap. If the pattern remains unaddressed for twelve months, it is likely to weaken equity, delivery confidence and the durability of outcomes.

EVIDENCE

EVI-HUM-002, EVI-HUM-005

CONFIDENCE

92%

DECISION IMPLICATION

Scale protection referral and safe disclosure pathways for humanitarian response.

CRITICAL FINDING

Finding 3: Critical finding 3: safe water access

Across Somalia's synthetic study areas, safe water access is the clearest differentiator of humanitarian response performance. The evidence is strongest in Lower Shabelle Cluster, where persons with disabilities face the largest gap. If the pattern remains unaddressed for twelve months, it is likely to weaken equity, delivery confidence and the durability of outcomes.

EVIDENCE

EVI-HUM-003, EVI-HUM-006

CONFIDENCE

93%

DECISION IMPLICATION

Restore minimum safe-water coverage at priority sites for humanitarian response.

VISUAL INTELLIGENCE

Executive Kpi Cards: Multisector severity score

What does this evidence mean for decision-makers?

The pattern shows how multisector severity score varies across priority segments or locations. Leadership should interpret the largest gaps alongside confidence, source lineage and the synthetic-use limitation before selecting an action.
